## IMPREGNATING WOOD VARNISH

### Wood ... so beautiful!

There is plenty around us, it is environmental friendly, it is warm and welcoming, it presents excellent strength and lasts for hundreds or even thousands of years. It can be used for everything ...from building homes and bridges to making wooden toys. Wood is probably the most useful and adaptable material on the planet with many thousands of different uses!

But in order to stay beautiful, strong and shiny it needs protection with the wood impregnating varnish "SILICON".

SILICON is an impregnating wood varnish suitable for the protection of any wooden surface indoors or outdoors. Silicon contains silicone and special waxes which protect the wood from dampness and discoloration that moisture provokes and also acts as water repellent.

SILICON is totally absorbed into the wood, while allowing the surface to breath and rejects moisture.

### Product characteristics

High performance.

High impregnating properties.

Protection against mold.

Allows the wood to breath.

Great resistance against weather changes.

Easy application.

**Packing:**  
0,75lt / 2,5lt
